

Hengxin induction heater is widely used for Induction Annealing works

Hengxin Science and Technology Limited

Hengxin is experienced in Induction Heating Machine and Induction Heating Power Supply, induction heating equipments can be used in induction heating service, induction heat treatment, induction brazing, induction hardening, induction welding, induction forging, induction quenching, induction soldering induction melting and induction surface treatment applications

Induction Annealing is a heat treatment in which material is exposed to an elevated temperature and slowly cooled.

Induction Annealing of the material changes physical properties of the material such as strength and hardness.

Features:

Improved power factor

Tropicalised design

Compact size

Highly adaptable for automation

Eco-friendly due to noiseless and flameless operation

No statutory approvals required

Lesser risk involved compared to conventional methods

Application Specific

Uniform annealing with better quality end product

Lesser Annealing cost comparing to conventional methods

Faster Annealing cycle

Higher productivity

Highest system efficiency

Auto or manual mode operation

Induction annealing has many benefits. The heat is generated directly in the material, leading to high efficiency and low energy costs. It is also a fast and controllable process, which will improve your throughput. And the heat is very accurate—crucial to meet today's stringent quality standards.

Applications:

Annealing of Milk Cans, Oxygen cylinder for neck formation.

Shell Annealing.

Annealing of wires.

Continuous Annealing of copper wires.

Stainless Steel / Aluminum Utensils

All Cold Formed Steel Components.

Stress Relieving.

Post weld Annealing.

Annealing of Copper tubes.

Annealing of knife, blade ends.

Annealing of brazing wires & Rods.

HengXin Induction offers seam annealing of tube welds and full body annealing of both magnetic and non-magnetic tube products. We also provide integrated induction annealing solutions for steel strip and wire production.

The right heat in the right place reforms the material structure and reduces internal stresses in just the way you want.

HengXin induction annealing machines are designed to be used for Normalising, Stress relieving and Process Annealing.
